

## Modular Boiler Systems - Built In Redundancy

When: February 25, 2022

Time: 12:00-1:00pm

Where: The K Company  
Training Center  
Compass Plaza  
2272 South Arlington Rd  
Akron, Ohio 44319

Directions to Room: Enter second driveway heading south. The training room is at the end of the building on the left hand side.

Email Your Reservation To:

Description: This presentation will cover the benefits of the modular systems and the built in redundancy in the systems. In the industry, engineers are constantly looking to design the systems which provides its end users the best value for their buck. This presentation will cover the traditionally designed boiler systems and their current usage in the market. Then, these systems will be compared to the modular boiler systems and will analyze how these systems can be more energy efficient than the traditional designs. In addition, these systems are much easier to install and maintain in comparison to the traditional large systems. Due to the primary-secondary piping installation, it is easier to replace/retrofit these systems without affecting the system configurations.

Presented by:  
**Shaz**  
Bosch Thermotechnology

He believes in Lean methodology; thus, he conducts and present training in a manner which will cater to its intended audience. In April 2018, he joined the Bosch Thermotechnology's commercial division where he is helping to develop the commercial program along with the training program. As of November, 2018, he has assumed the role of Engineering Applications and Training Manager for the commercial division.
